## Senior Delphi Engineer · Legacy Modernization

xetr11@gmail.com · t.me/xetr\_11 · github.com/qwert11 · Dnipro, Ukraine · remote or hybrid

Delphi engineer, ten years owning the client side of the trading system at Ukraine's largest grocery network: the VCL desktop application its stores run on daily, MS SQL, the fiscal workflows. Currently migrating it from Delphi 6 to Delphi 12/13 with a purpose-built tool that diffs UI and database mappings between versions.

## AT A GLANCE

---

- 10 years — in production retail systems, 2016 to now
- 33 — internal systems of the network I built or extended
- 6 → 12/13 Delphi — leading the trading client migration between versions, 2024 to now

## WHAT I DELIVERED

---

- Leading the trading system client migration from Delphi 6 to Delphi 12/13, with a purpose-built tool that diffs UI and database mappings between versions so the switch does not break store operations.
- Deliver fiscal-law changes end to end across the systems: excise stamps and electronic excise documents (AED), UKTZED commodity codes, customs simplifications, new VAT rates, all in a live retail network without stopping the stores.

## STACK

---

Desktop: Delphi 6 → 12 / 13, Object Pascal, VCL, DevExpress, FastReport, RX Library, Indy, NativeExcel / NativeXml, ADO / OLE DB

Data: MS SQL Server, T-SQL, PostgreSQL, Oracle, Firebird, SSIS, SSRS

Integrations: EDI / e-document flow, M.E.Doc

Quality and delivery: Git / private NuGet feed

Engineering practice: Production ownership, Legacy modernization, Integration design

## KEY PROJECTS

---

### Trading client migration: Delphi 6 to Delphi 12/13 (2024 — present) — Migration lead

Moving the trading system client to a modern compiler with a core redesign. Built a separate tool that diffs UI and table mappings between the old and new versions, so the migration runs without stopping stores.

Delphi 12/13, Object Pascal, VCL, MS SQL, DevExpress, FastReport

[https://github.com/qwert11/d6\\_d13\\_dbmapping\\_checker](https://github.com/qwert11/d6_d13_dbmapping_checker)

### Fiscal workflows: excise stamps, e-excise documents, customs (2019 — present) — Owner of the workflow

End-to-end delivery of legislative change inside the trading system: excise stamp scanning, electronic excise documents, tax invoice adjustments, UKTZED codes, customs simplifications, the 14% VAT rate.

Delphi, T-SQL, MS SQL, EDI, M.E.Doc

### Legacy system map (2026) — Author

A tool for mapping the trading system before migration: Python parses .dfm and .pas files, extracts stored-procedure calls and screen relations, and a Next.js app renders it as an annotated map.

Python, Next.js, TypeScript, PostgreSQL

## EXPERIENCE

---

### ATB-Market — Lead Software Engineer

2016-06 — present · Dnipro

- Own the client side of the trading system that the network's stores run on daily: supply documents, pricing and fiscal invoices, MS SQL.
- Leading the Delphi 6 → 12/13 client migration, including a core redesign, without interrupting store operations.
- Fiscal-law changes delivered end to end: excise stamps and AED, UKTZED, customs simplifications, VAT rates, in a live retail network.
- Integrated the trading system with suppliers and back office: EDI orders and waybills, tax documents via M.E.Doc, data exchange with Oracle EBS and 1C.
- Since 2018 also build the ASP.NET Core services that gradually take over the Delphi client's functions — both sides

of the modernization.

## **Kryvyi Rih Iron Ore Combine — Software Engineer**

2013-06 — 2016-06 · Kryvyi Rih

- A system for ore extraction and shipment accounting, developed and maintained in production.
- Automated per-shift distribution of consumables and hazard-pay meals.
- Maintained production-preparation and budgeting systems; implemented Firebird table synchronization.

Earlier: Freelance and private practice — Full Stack Developer (2015–2016) · Modern Professions Courses — Programming Instructor (2015–2016) · OSSystem — Developer (2012–2013)

## **DOMAIN KNOWLEDGE**

---

- Excise control: electronic excise stamps and documents (AED): Stamp scanning, electronic excise documents, document number in the invoice
- Tax invoices and adjustments: Issuing, adjustments, field rules aligned with the tax service
- Commodity classification codes (HS / UKTZED): Commodity code synchronization across the network's systems
- Customs and import clearance: Customs declarations, import receipts into warehouses, reporting
- EDI and e-document flow: Orders, waybills, pooled packaging, supplier exchange
- VAT rates and pricing regions: Cross-system rate changes, region setup when a store opens

## **EDUCATION AND CERTIFICATES**

---

- Computer Engineering · computer systems and networks — Zaporizhzhia Institute of Economics and Information Technologies
- Mining Engineer, underground development — Kryvyi Rih Technical University

## **CODE ON GITHUB**

---

- SQL Profiler Normalizer — turns profiler sp\_executesql output into a readable EXEC, fully client-side  
<https://github.com/qwert11/sql-profiler-normalizer>
- Delphi 6 → 12/13 migration checker — Python parses .dfm forms and diffs stored-procedure calls and parameter bindings between ADO and FireDAC  
[https://github.com/qwert11/d6\\_d13\\_dbmapping\\_checker](https://github.com/qwert11/d6_d13_dbmapping_checker)

## **LANGUAGES**

---

- Ukrainian — native
- English — technical documentation and written communication
